MÜHLBAUER GROUP AT A GLANCE

MÜHLBAUER'S BUSINESS UNITS AND SITES

Founded in 1981 in the heart of Bavaria, the Mühlbauer Group has ever since grown to a leading global player in the fields of Parts & Systems, Semiconductor Related Products, Document Solutions & Equipment for Security Systems, and innovative Technologies for Electromobility and Flexible Solar Solutions. With around 4,000 employees, technology centers in Germany, Malaysia, Slovakia, the U.S. and Serbia, and 35 sales and service locations worldwide, Mühlbauer created a strong competence network around the globe.

Our global corporation continuously invests in the most modern innovations and creative ideas in order to enhance our competences and to provide you with optimized solutions. We aim to protect the environment with our advanced technologies and make life easier for countless people.

Our in-house precision part production **MPS** – Muehlbauer Parts & Systems – guarantees unlimited flexibility and highest customer satisfaction.

Our business unit **AUTOMATION** does not only develop and assemble individually customized production systems, but also offers intelligent software solutions for production automation

(Industry 4.0). Vision inspection technologies as well as semi-conductor and RFID applications complete our comprehensive portfolio.

Our youngest and currently most dynamic division **NEW TECHNOLOGIES** brings unique machinery requirements to series production. For the e-mobility industry, we have been offering highly efficient production lines for the manufacture of pouch cells and prismatic cells for lithium-ion batteries, as well as MEA's & stacks for fuel cells of renowned automotive manufacturers since 2022. Another promising area in this business field is our expertise in precise material handling, which enables us to provide innovative production concepts for solar cells on flexible surfaces.

Our business unit **SECURITY®** is established as a competent partner for the implementation of security systems for identifying and verifying both documents and individuals. Our clients benefit from more than three decades experiential value which we have gained during the realization of over 300 ID projects worldwide.

There is no "can't do" at Muehlbauer. We tailor your solution!

COMPETENCE IN RFID

	ANTENNA PRODUCTION	CHIP HANDLING	CONVERTING	PERSONALIZATION	
1985		■			Development of our core competence Chip Handling: Specialization on small chips, high speed and high accuracy for Flip Chip technology
1988		■			First turnkey production solutions for Smart Cards
1995		■			Development of world first RFID Inlay Production System (TAL 1500). Since then, Mühlbauer has been a major driving force for the RFID production technology
2004		■	■		Mühlbauer draws up the strategy to become a turnkey solution provider for the complete RFID Factory. Our target is to provide our customers the most efficient and competitive RFID production and personalization solutions
2010			■		First Converting solution
2014	■				The latest innovations "Antenna Production Systems ACS" was realized
		■			The revolutionary "Direct Die Attach System DDA 20000" Roadmap for 100.000 UPH entered the market
				■	The latest "Personalization Technologies" are presented to the market
	■	■	■	■	The Mühlbauer Group releases its new roadmap "CONCEPT 2020" during the 1st "RFID Innovation Days" event
2018		■			The DDA 40000 is launched
2019	■	■	■	■	Mühlbauer release "Concept 2023" + MB PALAMAX®
2020		■			The world record machine DDA 80000 WF was launched as the "front runner" of our flexible DDA WF Family
			■		CL 90000 a revolution in high speed converting
2021	■				APS & ACS - newest market solution available
				■	PL Light - Personalization solutions approach to medical applications
2023			■		Release of CL 40000 and IL 30000

SMART FACTORY CONCEPT

THE FUTURE OF RFID MANUFACTURING

Based on the machine innovations from the Concept 2020, we respect the needs of high volume production linked with a sustainable green process and developed the Smart Factory Concept. The Smart Factory Concept is the roadmap for high automated,

sustainable production and material flow. Based on the intelligent production planning, the use of automated intelligent vehicles, preventive maintenance and full production transparency, there is only limited manpower required.

The integration of various manufacturing processes leads to stable and productive manufacturing lines, which guarantee high volume production with consistently high yield and uptimes. Furthermore there will be up to 30% less floor space required. With our Smart Factory Concept we combine the revolutionary

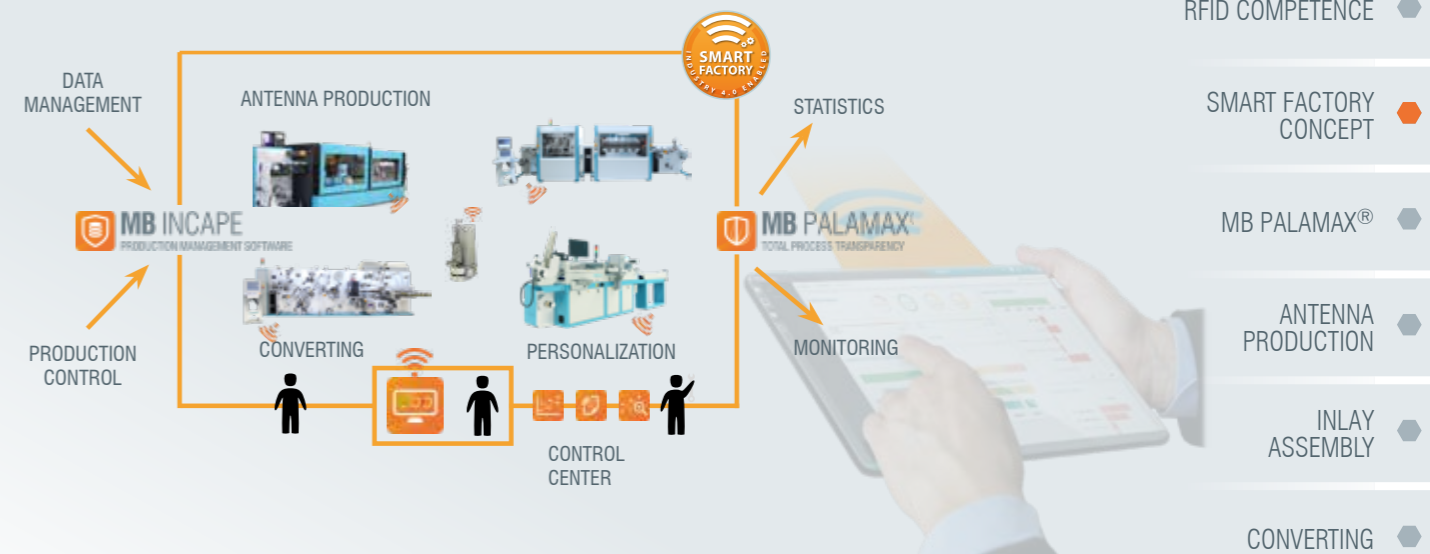

advancements with our unmatched expertise to a state-of-the-art technology controlled, monitored by our own-developed software solution. We will give our very best to develop the future technologies and always provide you the most competitive solutions.

THE RFID FACTORY

YOUR PARTNER FOR THE COMPLETE RFID SMART FACTORY

Nobody knows where the rapid growth of the RFID market will lead us to. Mühlbauer is able to provide you with the right technology to scope with the demands of tomorrow. Not only supply chain compression, high UPH and yield will be our challenge, in future we need to work on sustainable green manufacturing technologies and the decrease of process costs. Our new Concept 2023 will offer the way to build a smart RFID factory

Industry 4.0, by having automated control of the manufacturing data; material and process flow. This new factory concept will be able to be more productive on less space and will even further reduce the cost. The total process can be handled by just a few people and will guarantee the highest utilization of the installed capacity. Even non Mühlbauer machines will be supported.

- Optimized material flow by automated vehicles for material transport
- Optimized machine utilization
- Preventive maintenance
- Support engineering in precise detection
- Fully automated data collection in real time
- Increased OEE and very fast ROI within months
- Significant reduction of manpower and floor space
- Full production transparency

MB PALAMAX®, Mühlbauer's Smart Factory solution, is developed for card, tag or booklet productions, personalization factories and semiconductor backend shop floors. Consisting of an NOSQL database, it is designed to set and collect process data to monitor and improve the efficiency of production and person-

alization. The collected process data is stored in big data sets for later processing, visualization and statistical analysis. MB PALAMAX® is the backbone of our Smart Factory solution, by collecting all relevant data and handling the process & material flow.

KEY FEATURES

- Monitor your production in real time and generate real production statistics with your preferred KPIs. For specific chip types only
- Improve your transparency
- Gain better data to investigate, understand and portray process flows and relationships.
- Run your production with improved security and optimally employed, well-trained staff.
- Intuitive and easy to use web interface
- Responsive user interface design allows optimal presentation on any chosen device
- Data collection from the shop floor of Mühlbauer equipment and also third party Mühlbauer's equipment
- State-of-the-art big data software architecture ensures future reliability

FEATURES & ADVANTAGES

-  **MB PALAMAX.MONITOR**
Monitors the real-time performance of the production
-  **MB PALAMAX.STATS**
Statistical tool which analyzes collected data & delivers customized statistics on OEE
-  **MB PALAMAX.REMOTE**
Enables the remote operation of machines on the shop floor from a control centre
-  **MB PALAMAX.TRACE**
Allows for the auditing of single manufacturing runs
-  **MB PALAMAX.MAINTAIN**
Enables the implementation of maintenance on demand
-  **MB PALAMAX.REPORT**
Provides extensive reporting capabilities and data dumps
-  **MB PALAMAX.RECIPE**
Enables production engineering to prepare & test a repeatable factory set-up. Factories can switch between products within minutes.

- The only software solution worldwide to combine personalization data management, complete production control and material management
- Covers the full production control requirements
- Highly automated workflows with little operator interaction
- Streamlined web-based user interfaces with easy localization

ANTENNA PRODUCTION

TECHNOLOGY OVERVIEW

Driven by the need of environmental friendly production processes, fast and flexible production cycles and high volume production capabilities, Mühlbauer brought the antenna manufacturing to the next level. The Antenna Cutting System (ACS) and the Antenna Printing System (APS) are designed to offer zero waste

production without the need of harmful chemicals. The Mühlbauer antenna production technology marks a milestone in supply chain compression, antenne on demand production, full and full control over your design.

ANTENNA PRODUCTION

INLAY ASSEMBLY

CONVERTING

PERSONALIZATION

ACS 350

ANTENNA CUTTING SYSTEM

Mühlbauer's Antenna Cutting Systems ACS 350 produces reliable UHF aluminum antennas on PET. The reel-to-reel system uses a two layer input material with a bottom material of PET and a top layer of aluminum. In the core process of cutting, the milling wheel mechanically removes the unneeded aluminum area from the aluminum layer and only leaves the desired antenna pattern standing, while the PET layer remains untouched. For a flexible production of different antenna patterns, the magnetic cylinder can be easily equipped with a different cliché (pattern).

The integrated cleaning station with fixed brushes and suction system cleans the web and cliché of any loose particles. The next process steps check the quality of the production. A contactless UHF test system verifies the antenna performance by means of an electrical test and loop simulation. In the subsequent vision inspection process the full antenna and the critical antenna gap is checked. Antennas which fail the quality inspection are marked as such.

EFFICIENT GREEN WAY OF ANTENNA PRODUCTION

BENEFITS

- Up to 50% process cost reduction „compared to alu etching“
- 75% Time saving „antenna on demand – in 1 hour“
- Environmentally friendly „sell your alu flakes“
- Less inventory / work in process

FEATURES & ADVANTAGES

ADVANTAGES

- Supply chain compression
ship your new RFID labels within 24 hours!
- Just-in-Time production
for high volumes up to 2 billion / year
- Rapid prototyping
less than 3 hours from idea to sample
- Green process
collection of waste, dry process, no chemicals involved
- Independent from suppliers
with fast reaction to the market

WORKSTATIONS

- Input spooler
- Cutting tool
- Cleaning station (with suction unit)
- Tester and bad unit marker
- Output spooler

PRODUCT REQUIREMENTS

- Material: up to 350 mm PET/Alu
- Antenna length: 3 - 105mm
width: up to 320mm
- Pitch: $8\text{mm} \leq x\text{-distance} \leq 100\text{mm}$ depends on cliché

THROUGHPUT

- Up to 25m/min
- Up to 160 000 UPH (20 mm pitch, 4 row)
- Up to 2 billion / year

DIMENSIONS

- Length 7220 mm
- Depth 3440 mm
- Height 2900 mm
- Weight 4560 kg

APS 350

ANTENNA PRINTING-SYSTEM

The completely new approach of the APS makes it possible for Smart Label suppliers to print their own antennas In-house on demand. The new process is cleaner and faster than all the conventional antenna technologies currently available on the market. With APS 350, copper ink antennas can be produced undergo-

ing an integrated quality assurance system. Especially for Smart Label producers that underlie fast reaction times, the APS is an interesting tool as they can produce antennas within hours instead of weeks.

FEATURES & ADVANTAGES

ADVANTAGES

- Supply chain compression (no shipping from sub-supplier)
- Print-on-Demand flexibility (with existing design production within 8 hours)
- Know-how remains in your company
- Tag disposal < 30 days in standard composter

WORKSTATIONS

- | | |
|-----------------|------------------|
| Input spooler | Sintering system |
| Printing system | Visual tester |
| Drying system | Output spooler |
| Drive module | |

ANTENNA ON DEMAND ON PAPER SUBSTATE

BENEFITS

- Fully decomposable copper antennas on paper
- Copper ink printing process without any waste chemicals (green process)
- Enables two layer products (green design)
- Cost reduction up to 70% compared to silver printing
- In house antenna supply – just in time
- UHF production

THROUGHPUT

- up to 3 m/min, roadmap for 8 m/min with rotative screen print
- up to 36,000 UPH (20 mm pitch, 4 row)
- up to 240 Mio. per year

DIMENSIONS

- Length 6000 mm
- Depth 2100 mm
- Height 2300 mm
- Weight 2000 kg

TECHNOLOGY OVERVIEW

Thanks to continuous development efforts, our chip attach machines are the most proven solution for inlay production. Besides the well-known Mühlbauer quality & technology standards, our DDA 80000 WF demonstrates leading edge performance with a

world record and unique UPH up to 80.000. With our green DDA 40000-P your paper inlay will improve your operations to environmental friendly and flexible inlay production.

DDA TECHNOLOGY

THE REVOLUTION IN FLIP CHIP DIE ATTACH - PROCESS FLOW

ADHESIVE APPLY

- Latest generation of adhesive jetting technology available
- Glue savings approx. 25 % compared to dispensing system
- Highest flexibility for all antenna formats

PRE-BONDING

- Machine accuracy ± 15 µm, die attach accuracy ± 30 µm
- Die handling from 0.2 x 0.2 mm up to 5.0 x 5.0 mm
- Full throughput with 100 % vision control for highest yield

FINAL BONDING

- Smallest & most efficient thermode generation 0.5 N to 5 N ± 10 %
- Best thermode coplanarity ± 5 µm/mm
- Highest process accuracy ± 50 µm (after final bonding)

TESTING & BAD UNIT MARKING

- 100% tested output quality
- In-house customized reader antenna design

UPWINDING OR SLITTING

- Single or multirow reels for label / ticket conversion

SUITABLE FOR EVERY APPLICATION

TAL 15000

FLIP CHIP ASSEMBLY LINE FOR WIDE WEB

The TAL 15000 inlay production system is the current benchmark and represents the most proven generation of Flip Chip RFID inlay production with a throughput of up to 13 000 inlays per hour. This wide web system is characterized by its extremely high level of efficiency, flexibility and quality – and is suitable for the complete range of HF, NFC and UHF inlays. All processes

are covered in one modular platform: antenna web handling, epoxy jetting, flip chip die attach, final curing, testing and bad unit marking as well as slitting into single antenna rows. Furthermore a sheet cutter is available as an option to address the requirements of the contactless card market.

THE WORLD 'S BENCHMARK IN RFID INLAY PRODUCTION SYSTEMS

BENEFITS

- 5th generation of TAL machines
- Cost reduction with fast return of investment
- High efficiency with yield $\geq 99,7\%$
- Easy change over different antenna formats
- Ideal for regular & irregular web layouts

FEATURES & ADVANTAGES

ADVANTAGES

- Proven process know-how
- Fast changeover for almost all web layouts
- Highest accuracy and quality

DDA WF FAMILY

FLEXIBLE TECHNOLOGY FOR EACH & EVERY VOLUME

The DDA WF family represents the most proven and established Mühlbauer chip attach solutions for the latest market potentials. The flexible technology ready for each and every volume is based on our well-known direct die attach concept and beats up to 80 000 UPH with only one system and lowest footprint. With

our state-of-the-art technology, you can enter at any production volume and be flexible with upgrading your inlay production machine to the next stage. The production from 2 to 12 antenna rows is possible with tape width from 100mm – 385mm and 100% high-quality output control to reach highest yield.

FEATURES & ADVANTAGES

ADVANTAGES

- Highest flexibility for wide web chip attach production
- Future proven technology
- Upgradeable concept growing with the market - also later on field

DDA 40000

ENTER A NEW DIMENSION FOR CHIP ATTACH

10 years ago, the Direct Die Attach concept was developed in Mühlbauer's development department and continuously optimized. The patented technology beats the 40 000 UPH with only one place system and a 30% smaller footprint. The significantly higher

throughput and the reduced complexity results in 80% less die attach costs, an outstanding quality and highest reliability. This system redefines the high-volume production and provides considerable potential for further cost and performance optimization.

FEATURES & ADVANTAGES

ADVANTAGES

- Consistently high uptime
- Small footprint
- High accuracy & quality standards

DDA 40000 - P

SUSTAINABLE PRODUCTION SOLUTION FOR PAPER ANTENNAS

Our sustainable Direct Chip Attach DDA 40000-P was developed as a production solution for paper antennas. The equipment is based on our well-known Direct Die Attach technology and further allows you a green inlay production with the same flexibility and speed at your inlay production. The handling of transparent and non-trans-

parent materials guarantees you unlimited flexibility and prepares you for future material requirements. With 100% high-quality output control, the machine can attach up to 280 Mio. chips per year onto antennas on paper substrate.

GREEN PRODUCTION MEETS HIGH SPEED CHIP ATTACH

BENEFITS

- Well-prepared for future material requirements
- Handling of transparent & non-transparent materials (e.g. paper)
- Fully compatible with standard curing process

FEATURES & ADVANTAGES

ADVANTAGES

- More pitch independent
- Cleaning paper from dust before processing in the machine (optional)
- High accuracy & quality standards
- Handling of green and environmental friendly products

DDA + CL

MÜHLBAUER'S VISION FOR LINKED RFID PRODUCTION

Working accordingly to our Concept 2023 for full factory automation, the DDA+CL is the next step towards your Industry 4.0 production plant. With a footprint reduction, better utilization of manpower and improved material flow achieving further cost reduction, higher productivity and more process stability. The

DDA+CL offers a reliable and expandable platform for the RFID Factory of tomorrow. Our roadmap plans go even further to make this line expandable with inline antenna printing, personalization as well as variable data printing, to provide customers with an all in one pass, fully flexible high-end RFID production line.

FEATURES & ADVANTAGES

ADVANTAGES

- Footprint reduction
- Better manpower utilization
- No stockkeeping inbetween processes

IL 30000

RFID INLAY INSERTION LINE

The IL 30000 inlay insertion line is designed for the fully automatic insertion of RFID inlays into conventional self-adhesive labels. Label converters are using their standard label printing presses to produce self-adhesive labels in a very efficient reel-to-reel process. By using the IL 30000, these labels can be

easily converted to Smart Labels by inserting “wet RFID inlays” between the adhesive labels and the liner in a stand-alone reel-to-reel-process (“de-lam/re-lam process”) with minimal invest and very fast production integration, it is your door opener into the RFID world.

FULLY AUTOMATED INSERTION OF RFID INLAYS

BENEFITS

- Low investment cost and fast return of investment
- Easy in operation
- Highest placement accuracy

FEATURES & ADVANTAGES

ADVANTAGES

- Easy process solution with very small footprint
- High production speed
- Known process de-lam/re-lam
- Effortless expansion of your portfolio

WORKSTATIONS

- Input spooler for self adhesive labels
- Feeding and despende system of wet inlay
- Lamination
- Tester and bad unit marker
- Output spooler

APPLICATION POSSIBILITIES

- Self-adhesive HF & UHF labels
- Multilayer labels (sandwich labels)
- Can also be used as an applicator

DIMENSIONS

CL 40000

CONVERTING LINE FOR MID-VOLUME PRODUCTION

The CL 40000 is characterized by a successful combination of cost efficient design together with a high flexibility in output configurations. It is possible to convert wet inlays or finished labels directly from dry inlays in reel-to-reel mode with a wide variety of different adhesive options. All processes are in one modular system: antenna web handling, label lamination, die cutting as well as output testing. The system has a throughput of up to 40 m/min

for rotative cutting. With an optimized change-over time between different products paired with lowest tooling costs, this converting system is perfectly suited for a production with smaller lot sizes and at the same time fast changing applications. The friendly user interface, the intuitive handling of this converting machine and the low initial investment makes the CL 40000 especially interesting for entering the RFID market.

BEST PRICE/PERFORMANCE RATIO FOR SMALL & MID-RANGE VOLUME

BENEFITS

- Rotative die cut
- Fast return of investment
- Reduced production time and costs
- Dry inlay with hotmelt possible
- Wet inlay dispensing

FEATURES & ADVANTAGES

ADVANTAGES

- Fast, easy & cost-minimized product change over
- Easy in operation
- High precision inlay placement
- Small footprint

CL 60000

CONVERTING LINE FOR HIGH-VOLUME PRODUCTION

Mühlbauer's CL 60000 Converting Line represents a flexible, fast and modular concept for a high range of converting possibilities: Smart Labels and Smart Tickets from reel-to-reel or from reel-to-ticket/fanfold. Various input materials like dry inlay, wet inlay and even compensation layer (4-layer) can be processed. All processes are in one platform: reel-to-reel antenna web handling, label/ticket lamination, die cutting as well as out-

put testing – of course, with leading edge performance, state of the art quality and the best cost/performance ratio available on the market. Mühlbauer's converting machine CL 60000 is perfectly suited for high-volume RFID Label and Ticket production, where the issues of fast change over times and high quality are taken into account.

MOST FLEXIBLE MODULAR CONVERTING SOLUTION

BENEFITS

- Price / Performance leader
- Highest level of customization
- Lowest cost of ownership
- Flexible for labels, tickets and hangtags
- Dual-row solution

FEATURES & ADVANTAGES

ADVANTAGES

- High application flexibility
- Flexible for dry and wet inlays
- Upgrade possibilities also in field
- Hotmelt and/or transfer glue process

WORKSTATIONS

- | | |
|----------------------------------|-----------------------------------|
| Input spooler | Lamination |
| Input tester and bad unit marker | Cutting |
| Adhesive components | Output tester and bad unit marker |
| Material handling | Output spooler |

CONFIGURATION FLEXIBILITY

- Transfer adhesive and hotmelt
- Second die cutter
- Single ticket output
- 4-Layer handling
- Performance testing inline
- Vision system
- Delam/Relam process

YOUR APPLICATIONS

- Self-adhesive label
- Ticket on reel
- Single Ticket / Hang tag

SPECIAL APPLICATIONS

- CL wide web

DIMENSIONS

- Length 8000 mm
- Depth 3600 mm
- Height 2500 mm
- Weight 5610 kg

CL WW

GAIN HIGHEST COMPETITIVENESS WITH HIGHEST FLEXIBILITY

Thanks to the modular platform of our converting line family, the CL WW system is characterized by a successful combination of cost-efficient production and highest flexibility. Smart labels, smart tickets and wet inlays can be processed from reel-to-reel in multyrow production. Paired with the highest speed and per-

fect product quality. Due to 100% output control the converting system is perfectly suitable for mid- and high volume production. To gain limitless production flexibility the machine can operate in single row as well as in multi row application.

FULL CONVERTING PORTFOLIO SOLUTION

BENEFITS

- Highest level of customization
- Flexible for labels, tickets, wet inlay
- Multi-row solution
- Input material width upto 350 mm

FEATURES & ADVANTAGES

ADVANTAGES

TECHNOLOGY OVERVIEW

The personalization brings each label/ticket to life and with our wide range of solutions they represent the ideal machine for chip encoding, printing and verification. The efficient and fast set-up allows for a rapid change over. With transport speeds up to 60m/

min the systems reaches peak-performance values with regard to UPH. To guarantee 100% flawless output quality, 100% of the labels/tickets are tested for functionality and print. The license free encoding gain you highest flexibility for all encoding formats.

CHIP ENCODING & PRINTING

PROCESS FLOW

ENCODING

- Encode electronically data to each tag's RFID chip
- Data base containing all pertinent information
- For advanced encoding features such as password lock, perma lock and more

PRINTING

- High-speed digital print system
- Mono chrome or full colour
- Variable Data-Printing (VDP) capability

DIE CUTTING

- Rotative or semi-rotative die cutting process
- Fast and accurate
- Pitch controlled

VERIFICATION & TESTING

- Every label will be tested for RF functionality and/or visual defects and/or data match
- Bad labels can either be visually marked or completely removed from the roll

MÜHLBAUER ENCODE FOR MAXIMUM FLEXIBILITY AND INDEPENDENCE (MCES)

The personalization software MÜHLBAUER ENCODE is based on Microsoft Dynamic Link Library (DLL) and therefore allows the adaption to any RFID Chip and encoding algorithm.

Your Advantages:

- Suitable for all chip types with unique ID (TID or UID)
- For all frequencies (HF/NFC & UHF)
- Encoding algorithm is freely programmable

The DLL is based on Microsoft Visual C#. At the Mühlbauer Academy customers receive specialized developer trainings for the coding of the DLL. Our developer workstations are equipped with an offline RFID-Reader kit for HF and UHF frequencies and are available for testing and debugging.

PL LIGHT SCAN & ENCODE

FASTEST & SIMPLEST ENCODING SOLUTION

Mühlbauer's latest PL light Scan and Encode technology guarantees you a high speed encoding solution at minimal cost. The line represents the ideal machine for encoding and verification of tickets and tags with same high speed and 100% output control

functionality test and automatic reproduction of rejected tickets. With the lowest footprint and effort the wide range of formats UHF or HF/NFC can be encoded.

HIGH SPEED ENCODING PAIRED WITH MINIMAL COST

BENEFITS

- Multi-job handling in one batch
- Highly efficient personalization line
- Low investment costs
- Small footprint
- License free encoding

FEATURES & ADVANTAGES

ADVANTAGES

- Wide range of encoding formats for UHF, HF or NFC
- MB ENCODE: Suitable for almost all chip types
- Ready for Industry 4.0 and the MB Palamax Software solution

WORKSTATIONS

- Input spooler
- Trigger sensor
- Barcode reader

PL LIGHT

SINGLE TICKET / REEL-TO-REEL PERSONALIZATION LINE

Mühlbauer's personalization line PL LIGHT represents the ideal machine for the encoding, labeling and verification of tickets and tags for low and medium volumes. The efficient set-up and fast changeover allows for rapid changes of orders, either reel-to-reel or ticket-to-ticket. Also, a multiple handling of jobs is possible. Each ticket is tested and automatically reproduced when

rejected in order to guarantee flawless quality and lot integrity. PL light's small-sized footprint allows it to be placed even in the smallest spaces, e.g. in an office environment. Furthermore, this economically-priced system is available with the license-free Mühlbauer ENCODE software solution, which additionally saves costs during operation.

FEATURES & ADVANTAGES

ADVANTAGES

- Wide range of encoding formats for UHF, HF or NFC

PL 30000

UNIVERSAL LINE FOR MID & HIGH-VOLUME

Mühlbauer's personalization line PL 30000 represents the ideal machine for encoding, labeling and verification of tickets and tags for medium and high volumes. The efficient set-up and fast changeover allows for rapid changes of orders in a reel-to-reel or reel-to-ticket process. The PL 30000 can handle all common

UHF / HF / NFC frequencies. Each ticket is tested and automatically reproduced when rejected in order to guarantee flawless quality. PL 30000's economically-priced system is available with the license-free Mühlbauer ENCODE, which additionally saves costs during operation.

FEATURES & ADVANTAGES

ADVANTAGES

- Automatic reproduction of rejected tags
- Efficient set-up and fast change over different products
- Well proven MB cutting and lamination technology
- Wide range of encoding formats for UHF, HF or NFC
- MB ENCODE: Suitable for almost all chip types
- Ready for Industry 4.0 and the MB Palamax Software solution
